Joel Marquardt – Discussion of Scope (Phase/Not Phased)

Phase I Design Development set

- Understanding where we are going with the money
- This would allow the committee to take it in chunks rather than one big cost. Mr. Marquardt stated that adding stairs would require a civil and/or structural engineer which may not be required. So by doing a design phases this would reduce the scope costs.

Over the next few meetings the committee needs to determine what will be in each of the spaces within the building. The committee figures there are 6 spaces, 2 for each floor. The committee discussed briefly the priorities and the desire/need for a sally port, as well as understanding that all options are on the table right now. As we set priorities and costs then we would know what we can put in and what is not feasible.

Time Frame:

October 19 council meeting – scope to us by 14th of October for next council meeting –
October 20th and 27th lunch meeting, noon to 1 pm
